solos04_fixit1.py:

Problem: The function compute_grade is being called, but there is nothing being returned from the function.

Solution: Added a return statement after line 32 so that the function call will send out the result.

solos04_fixit2.py:

Problem: This program is calling on a module that is not included in the base Python package

Solution: Added the import random statement to line 1 to correct the error on line 17

solos04_fixit3.py:

Problem: File was not calling the main() function so nothing would run

Solution: Added the main() function call at the end of the file

solos04_fixit4.py:

Problem: The choose_sandwich() function does not accept any arguments, but line 27 includes an argument in the function call

Solution: Removed the argument from the function call on line 27

solos04_fixit5.py:

Problem: The print statement in like 49 called for the breakfast variable but the function that establishes that variable (breakfast_food) was never called

Solution: Added breakfast_food function call to the main() function
